

Coskun Kocabas, Ph.D., is a Professor of 2D Materials Devices at the University of Manchester. With expertise in physics, he has made significant contributions to the field of innovative devices, focusing on graphene and 2D materials. His research spans areas such as optics, nanophotonics, terahertz photonics, and wearable devices. Dr. Kocabas has received prestigious awards and grants for his work and has published extensively. He is actively involved in teaching, knowledge transfer, and public engagement, and his contributions continue to advance the field of 2D materials devices.
